TECHNICAL SKILLS

Languages: Java, Python, TypeScript, Kotlin, Rust, JavaScript, HTML, CSS, SQL(PostgreSQL, MySQL)

Frameworks & Libraries: React, NoSQL(MongoDB), Node.js, AWS

Tools & Technologies: Git, Jira, JUnit, GitHub/GitLab, Linux, UNIX, Pytest, Jest

EXPERIENCE

Software Developer Intern

Jan 2025 – Aug 2025

1Password

Toronto, ON (Remote)

- Expanded guided setup to support business accounts, contributing across the stack (**TypeScript, Rust, Kotlin**) to improve onboarding flow in the browser extension, web app, and desktop app.
- Improved OPA (1Password Android) autofill setup success by **~10%** through improved onboarding instructions; impact confirmed via telemetry metrics.
- Implemented Android side of a Help Menu redesign, collaborating with product, design, and backend teams.
- Contributed to improving a Rust-based autofill engine by diagnosing and resolving complex field-detection and saving logic issues, helping improve stability for thousands of users.
- Reviewed and contributed MRs in GitLab, participated in sprint planning and technical discussions, and improved problem-solving by proactively asking questions and seeking feedback.

Software Developer Intern

May 2024 – Dec 2024

KNS Canada Inc.

Toronto, ON

- Collaborated in an agile team to develop a fullstack application using a **React** front-end and **Node.js** backend services with **REST APIs**, **optimizing data retrieval time by 50%**.
- Designed and implemented a **PostgreSQL** database, replacing Excel to improve data uniformity and efficiency.
- Ensuring data uniformity by implementing strict data validation and constraints, reducing data inconsistencies and errors common in the previous Excel-based system by an estimated 30%.
- Participated in code reviews and used Git/GitHub for source code control, enhancing teamwork and code quality.

PROJECTS

Veritas: Political Bias Detection and Fact Checking | *Python, PyTorch, FastAPI, TypeScript, React*

- Built an end-to-end AI system for real-time bias detection and claim verification, via a Chrome extension.
- Built a sentence-level political bias classifier (Left/Center/Right) achieving 82% accuracy on held-out data and 61% on unseen sources, a **14% improvement** over the baseline.
- Applied adversarial adaptation with gradient reversal and LEACE source erasure on DeBERTa-v3-large to learn ideology instead of source-specific writing patterns.
- Developed a FastAPI server with politicalness filtering, sliding window context, weighted aggregation, and GradientXInput explainability, averaging **2.7s per article**.

Halal Scanner Android App | *Kotlin, Android SDK, SQLite*

- Developed an Android app using Kotlin and Google's ML Kit Vision API, integrating third-party APIs for real-time data processing and improving the user experience through seamless data retrieval.
- Utilized Android Room with SQLite for efficient local data management, enabling the storage of product status and images for up to 100 items in the user's history.

Game Server Rolling Backup | *Python, Pytest, Docker*

- Developed a Dockerized Python utility to automate game server backups with settings for users to determine how often backups occur and how long they are kept.
- Designed and implemented comprehensive automated testing strategies using Pytest, significantly enhancing the reliability and performance of backup operations.

EDUCATION

McMaster University

B.A.Sc Honours Computer Science Co-op

Hamilton, ON

April 2026
